## Growth Charts

The growth charts on the following pages were published by the Centers for Disease Control and Prevention, United States Department of Health and Human Services. The information is based on the normal growth curves of children in the United States. To find your child's growth percentile, simply find the measurement on the vertical scale and move across the grid horizontally until you are even with the child's age. This will show you where your child measures compared to other children who are of the same age and gender. The most important thing to note is the pattern of your child's growth over time rather than one measurement at any one point in time.
